REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 3,2, 4, 5, 6, 7, 8, 10-16 and 18-26 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims.

As to claims 3, 2, 4, 5 and 8, the prior art of record does not teach wherein the management module determines the available bandwidth by determining a total bandwidth between the gateway and the customer premises equipment and subtracting a bandwidth allocated to or reserved for other applications. As to claims 6, the prior art of record does not teach wherein the management module selects the compression algorithm for the telecommunication information by identifying the compression algorithm that can provide a highest quality of service using the available bandwidth with the customer premises equipment.

As to claim 7, the prior art of record does not teach a memory operable to store subscriber information associating each of a plurality of subscribers with a class of service; wherein the management module is further operable to identify a subscriber for the telecommunication information, to identify a class of service associated with the subscriber, and to select the compression algorithm according to the class of service. As to claims 11, 10, 12, 13 and 16, the prior art of record does not teach wherein determining the available bandwidth further comprises determining a total bandwidth

between the gateway and the customer premises equipment; and subtracting a bandwidth allocated to or reserved for other operations.

As to claim 14, the prior art of record does not teach wherein selecting the compression algorithm for the telecommunication information further comprises selecting compression algorithm that provides the highest quality of service using the available bandwidth. As to claim 15, the prior art of record does not teach storing subscriber information associating each of a plurality of subscribers with a class of service; identifying a subscriber for the telecommunication information; identifying a class of service associated with the subscriber; selecting a compression algorithm according to the class of service.

As to claim 18, the prior art of record does not teach a digital subscriber line access multiplexer (DSLAM) operable to communicate the data packets generated by the gateway to the customer premises equipment using a digital subscriber line; wherein the available bandwidth relates to a bandwidth of the digital subscriber line between the DSLAM and the customer premises equipment. As to claim 19, the prior art of record does not teach a cable modem termination system (CMTS) operable to communicate the data packets generated by the gateway to the customer premises equipment using a cable link; wherein the available bandwidth relates to a bandwidth of the cable link between the CMTS and the customer premises equipment.

As to claim 20, the prior art of record does not teach a base station controller (BSC) operable to communicate the data packets generated by the gateway to the customer premises equipment using a wireless link; wherein the available bandwidth

relates to a bandwidth of the wireless link between the BSC and the customer premises equipment. As to claims 21, 22 and 23, the prior art of record does not teach wherein the gateway determines the available bandwidth by determining a total bandwidth for communications with the customer premises equipment and subtracting a bandwidth allocated to or reserved for other applications. As to claim 24, the prior art of record does not teach wherein the gateway selects the compression algorithm in response to determining that the compression algorithm provides a highest quality of service using the available bandwidth.

As to claims 25 and 26 the prior art of record does not teach wherein the gateway is further operable to identify a subscriber for the telecommunication information, to identify a class of service associated with the subscriber, and to select the compression algorithm according to the class of service.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
